

# SRWA Loaner Tools Program

## Empowering Consultants to Succeed

**Cutting-edge Forensic tools. No Cost.  
Maximum results.**

*Sustainable*  
**Roofing & Waterproofing**  
*Alliance*

## Experience and Innovation — Your Competitive Edge

SRWA-affiliated consultants bring more than years of experience to the table — their wide area of expertise, keen knowledge of all roofing materials and systems, and constant adaptation to the newest innovations makes them the perfect partners for SRWA.

Partnering with SRWA provides a competitive edge, supported by continuous education, innovation, and complimentary access to forensic tools through the Loaner Tools Program — empowering you to deliver unmatched precision and value without any cost to you.

## Why Take Advantage of the Loaner Tools Program?

Access premium tools and materials for your projects – free of charge.

Gain expert support from SRWA professionals.

Save time and reduce costs with hassle-free borrowing.

Stay ahead of industry trends with ongoing education.

Impress clients with cutting-edge solutions.

## Simple Steps to Success

**1** Navigate to the SRWA global website and access the Loaner Program section.

**3** Use our state-of-the-art tools to deliver outstanding results on your projects.

**2** Browse and choose the free forensic tools and resources tailored to your project needs.

**4** Once your forensic work is complete, return the tools and borrow again as needed for your next project.

## A few of the available tools include:

### Detec IntegriScanner

(IntegriScan Package – Includes Horizontal Platform and Vertical Roller)

A non-destructive Electronic Leak Detection (ELD) per ASTM D7877 (Standard Guide for Electronic Methods for Detecting and Locating Leaks in Waterproofing Membranes). Test uses a brush, broom, roller, platform, or probes, along with low- or high-voltage current, to find breaches, holes, and seam voids in the roof membrane or flashings by completing a circuit with the electrical charge.

### Digital Pull Tester

(Digital Extractor – Roofing and Construction Pull Tester)

Measures the pull-out force to validate a safe working load. Checks the correct installation of existing fixings. Measures the withdrawal resistance of fasteners used for attachment of various components to various materials. Proves the holding power of anchors.

### PosiTest AIR

Air leak tester for walls and roofs, per ASTM E1186. It comes with liquid test solution, and a detailed manual.

There are specific accessories for testing seams and corner flashings. This is a good quality control tool.

### Flir Infrared Camera

(E40bx)

A user-friendly piece of equipment with multiple uses. The most requested item in the loaner program; advanced booking may be required. Will not find a water leak, but can find an air leak if there is a significant delta T differential across the building envelope. Helps overall to locate the presence of wet roof insulation.
